Taiwan	823	4.1	August 22-31, 2008	Telephone	National
Turkey	1023	3.1	Jul 28 – Aug 18, 2008	Face-to-face	National
Ukraine	1047	3.1	August 9-21, 2008	Face-to-face	National

¹ In China, the survey was a probability sample of urban and rural households with land-line telephones in the provinces of Anhui, Hebei, Heilongjiang, Hubei, Jiangsu, Shanxi, Shanghai, Sichuan, and Yunnan—representing approximately 60 percent of the mainland Chinese population. The sample was 40 percent rural, 60 percent urban (rural households make up approximately 55 percent of the population).

² In Egypt, the survey was executed in the urban areas of Cairo, Alexandria, Giza, and Subra. These four urbanized areas represent 75 percent of Egypt's urban population, which is 42 percent of the national population.

³ In Indonesia, a national probability sample was conducted in both urban and rural areas and covering approximately 87 percent of Indonesia's population.

⁴ In Mexico, a random telephone sample of adults who had landline telephones was conducted in all 31 states and the Federal District. Telephone penetration in Mexico is 55 percent.

⁵ In Nigeria, the sample was developed by selecting six states, one per geographic region, based upon their size and representativeness. Within each state, sampling points were selected by means of a multi-stage random sample which disproportionately sampled urban areas. The final sample is 75 percent urban; Nigeria is approximately 50 percent urban.

⁶ In the Palestinian territories, a face-to-face national probability survey was conducted among the population of the West Bank, including East Jerusalem, and the Gaza Strip.

⁷ In Russia, all items were half sampled; each item was answered by at least 800 respondents.
